

Application Rate and Requirements: CBX Remediate

- Best applied with streamer-type sprayer nozzles on a conventional sprayer, however irrigation, fertigation and liquid banding are alternative application methods.
- CBX Remediate must not be tank mixed with herbicides, pesticides or fungicides.
- CBX Remediate may be tank mixed with other liquid fertilizers.
- A clean and neutralized sprayer tank is essential.
- Agitate tank to ensure CBX Remediate and water are thoroughly mixed prior to application.
- Incorporation of CBX Remediate in to soil is not necessary, unless extreme compaction exists.
- Can be applied to soil or foliage in both spring and fall.
- Apply CBX Remediate at least 10 days post herbicide application.
- 50% reduction of all conventional fertilizers based on same season soil analysis.

Plant or Crop Type	Area	CBX Remediate	Water			When to Apply
			Metric	Imperial	US	
All plant or crop types	One (1) Acre	10 litres	60 litres	13 gallons	15 gallons	Twice early in spring and fall.
